The objective of my article is to explore the case of Bangladesh economic getting stagnated. Is this really true? Let's by looking into the import of capital machineries data. Usually it should be a good indicator of domestic investment scenario.

```r
load('./RData/master.RData')
head(master)
```

```
##    year cap_mach Exports
## 1 FY94      520    9799
## 2 FY95      796   13130
## 3 FY96     1221   13857
## 4 FY97     1422   16564
## 5 FY98     1293   20393
## 6 FY99     1411   20851
```

What we find is the trend generally upward but during the last five years from 2011-13, we see a decreasing trend and for the last two years things have picked up. Now let's have a look at the exports data.

The chart shows a line graph with data points from FY94 to FY15:

- 9,799.0 (FY94)
- 16,564.0 (FY97)
- 24,923.0 (FY00)
- 33,242.0 (FY03)
- 62,601.0 (FY06)
- 97,498.0 (FY09)
- 180,313.3 (FY12)
- 226,485.9 (FY15)
